

## **A valuable time for the happy future of East Asian education**

KIM JEE HYE (KOREA)

In the summer of 2019, the week-long SPTC program was a great time. It was a time to meet good people, have many good experiences, and learn a lot. Thank you for preparing this program.

### **1. What I acquired and learned**

- 1) Visit to school** : I visited public elementary and private middle schools in Japan. In public elementary school, I had a short class, students are lovely and curious look like the students who I teach in Korea. I felt that the students looked similar, even though they were different country. The facilities of private middle school were very good. Through conversation with the teachers working at the school, I found out the differences and commonalities. Japanese teacher said that he works overtime a lot because he has to teach club activities after school. The similar thing is that parents made it difficult for teacher.
- 2) Discussion on education** : I liked the time to present and discuss the problems of education in Korea, Japan, and China. The economy has improved, but competition has caused students to struggle mentally. And the fact that teachers are in a difficult situation was similar.
- 3) Cultural experience** : I was impressed by the fact that when I was doing calligraphy experience, I gave feedback with orange paint. I think it's a good idea. The tea I drank during the tea ceremony was very delicious. There was a Hotel we stayed at Tachigawa Station, and I had

breakfast near by. Most of the people who came to the cafe in the morning were old men, but they were eating breakfast alone. He looked lonely. And it was good to buy various lunch boxes at convenience stores.

## **2. How I will make use of this experience for future activities**

- 1) Teaching students well:** Through this program, I felt that people live in a similar way, even though their nationalities are different. I want students from all over the world to be happy, and to do so, the teacher need to be happy and comfortable first so that you can love them more. I will abandon perfectionism, not be greedy, and love students. And I will tell students what I felt through this program. When students grow up later, I should teach them to lead society well.
- 2) Study hard at graduate school:** I am currently majoring in education psychology. I will study hard and study hard. I will study how students and teachers can live happier lives.
- 3) We are friends (drawing happy educational future) :** I met you for this program are all very friendly and nice. I want to cheer. Good people in each country's schools will teach students well. That's the future of East Asia in the education I think it is bright. I pray Everyone is healthy and have in peace.
